Joshua Zone

Principal Software Engineer

jzone1229@gmail.com • (725) 266-1049 • linkedin.com/in/zonejm • github.com/jzone1366 • Atlanta Metro, GA

Technically-minded engineer and leader with deep expertise in TypeScript, large-scale AWS data pipelines, and cloud-native distributed systems. Proven success building and scaling high-throughput ingestion and processing pipelines across multiple companies, handling millions of records with high reliability and low latency. Skilled in infrastructure optimization, performance tuning, and full-stack product development to drive scalability, cost efficiency, and operational excellence. Adept at aligning engineering roadmaps with business objectives and fostering collaboration across global teams. Passionate about automation, data-driven decision-making, and modernizing legacy systems into maintainable, cloud-native architectures.

Core Competencies: Large-Scale Distributed Systems | TypeScript & AWS Cloud Architecture | Data Pipeline Engineering | GraphQL & API Design | CI/CD & DevOps | Technical Leadership & Mentorship

Professional Experience

Principal Software Engineer 2025 — Present
Ten Mile Square Technologies (Remote)

Leading modernization of a Personal Loan Origination System, re-platforming a legacy COBOL mainframe application onto a TypeScript and AWS cloud-native architecture — designing scalable services, infrastructure, and workflows from the ground up.

- Architected reusable TypeScript component library, standardizing UI across the origination platform and reducing feature development time for engineering teams.
- Designed and implemented configurable loan workflow engine, streamlining the closing process and improving origination team efficiency.
- Optimized CI/CD pipelines, reducing build and deployment time by 35% and enabling faster, more reliable releases.
- Introduced Agile ceremonies and engineering best practices, improving sprint predictability and cross-team collaboration.
- Defined AWS cloud infrastructure architecture (Lambda, API Gateway, RDS, S3), establishing scalable, secure patterns for the modernized platform.
- Collaborated with business stakeholders and compliance teams to translate mainframe business logic into well-documented TypeScript services.

Director of Engineering 2024 — 2025
QL2 Software (Remote)

Elevated engineering expertise through comprehensive training on core systems and strengthened observability by deploying InfluxDB and Grafana across large-scale AWS infrastructure.

- Reduced ingestion costs by 20% and lowered cloud expenses by over 50% by re-architecting the high-throughput data pipeline as cloud-native TypeScript microservices on AWS.
- Accelerated pipeline processing speed by 75% through distributed systems reengineering; improved SAN resiliency with a 45% performance boost and cut latency by over 50%.
- Built real-time data quality monitoring pipeline using AWS, Snowflake, and Python, processing millions of records with high accuracy across global data sources.

Software Engineering Manager 2023 — 2024
Tealbook (Remote)

Drove end-to-end development of a greenfield data portal, ensuring scalable architecture and seamless implementation. Built high-performance GraphQL API, streamlining access to complex datasets for faster data retrieval.

- Shortened delivery cycles by over 75% through process optimization and enhanced product management strategies.
- Cut cloud costs by 45% by restructuring the AWS data ingestion architecture for efficiency and scalability.
- Boosted customer engagement by 60% through the development of an enhanced user interface using React.

Senior Software Engineer 2022 — 2023
SigFig (Remote)

- Transformed the React application into a modular component library, enabling client customization via configs and enhancing user engagement.

Senior Software Engineer 2021 — 2022
PlayVS (Remote)

- Maximized loading speed by 45%+ through advanced GraphQL caching strategies.
- Accelerated UI feature delivery by 30% by collaborating with the Design Team to implement company-wide design system.

Frontend Web Developer 2018 — 2019
Softvision (Remote)

- Visualized flu patterns across the U.S. by implementing an interactive D3.js map using collected temperature data.
- Enabled seamless research access by developing a centralized Data Portal for collected data.
- Directed all frontend strategy in collaboration with the VP of Engineering, ensuring optimal technical decisions.

Web Application Developer / Web Developer 2017 — 2018
Reflex Media Inc. (Remote) / Vegas.com

- Boosted conversion rates by over 40% via deployment of A/B testing tools.
- Enhanced in-app communication by 50% through implementation of a real-time user chat experience.
- Led migration of a legacy Java application to a modern architecture with a scalable Java API and React frontend.

Additional Experience

Lead Software Engineer | *Nathan James (Remote)*

- Developed a robust API-driven ERP system enhancing automation, invoicing efficiency, and real-time warehouse barcode scanning.

Lead Software Engineer | *PriceSpider (Remote)*

- Optimized 15+ AWS-hosted microservices processing high-volume B2C data, improving pipeline throughput and widget performance at scale.
- Boosted data ingestion rates 30%+ by redesigning TypeScript microservices for cloud-native scalability on AWS.
- Reinforced infrastructure, increasing reliability and reducing incidents by 40%+.

Web Developer Consultant | *Virtusa (Remote)*

- Delivered real-time, data-intensive application enabling Bond Traders to make informed decisions by architecting and developing a high-performance system under contract with Morgan Stanley.

Projects

PitchTrack | *iOS & watchOS* Swift, SwiftUI
Baseball pitch tracking app monitoring arm velocity, pitch count, ball/strike classification, and multi-session analytics for player development.

zonejm.dev | zonejm.dev React, TypeScript
Personal portfolio and CV site built with React and TypeScript.

dots | github.com/jzone1366/dots Open Source
Actively maintained dotfiles repository covering shell configs, editor setup, and developer tooling.

Education

Bachelor of Science in Information Technology & Web Science 2014
Rensselaer Polytechnic Institute, Troy, NY

Technical Proficiencies

Programming Languages	TypeScript, JavaScript, Python, Java, Golang, PHP
Frontend Technologies	React, React Native, Angular, Vue, HTML, CSS
Backend Technologies	NodeJS, GraphQL, Microservice Architecture, API Integration, Laravel
Cloud & DevOps	AWS (Lambda, API Gateway, S3, RDS, ECS, SQS), GCP, Cloud Migration, DevOps
Databases & Messaging	MySQL, PostgreSQL, MongoDB, Snowflake, RabbitMQ, Kafka
Monitoring & Logging	Loki, Grafana, Prometheus, InfluxDB, Telegraf
System Architecture	Distributed Systems, API Design, System Optimization
Development Tools	Git, JSON
